Inspiration

Game

Due to the recent viral craze surrounding the "Pop It" game, I have been contemplating the idea of digitizing it. By incorporating the captivating narrative of the Cotton Cloudie world into the game, I aim to enhance its appeal and engagement for players.

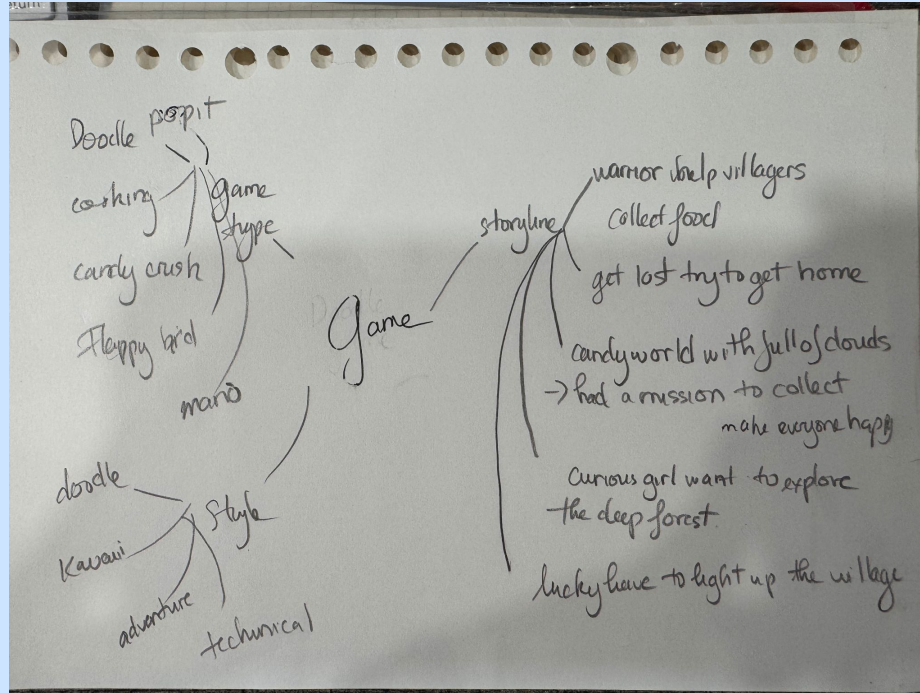

Story

Fluffie is a candy enthusiast who has a deep love for sweets. He has created a whimsical world called Cotton Cloudie, dedicated to his passion for candies. One unfortunate day, his candy machine malfunctioned, resulting in candies cascading and scattering all over the place. Now, the player has the opportunity to assist Fluffie in gathering all the scattered candies.

Audio

Music : 2 SFX : 1

Seperation

Music (sad)

melodies that are slow, haunting
when Fluffie struggling and in
need of help.

Fun kids playful

Music (vibrant, energetic)

lively and fast-paced
tempos,rhythmic energy
Player helps Fluffie overcome
the situation.

Popping sound

SFX

Create the sense of popping like
pop it game.

Reflection

Fortunately, despite my initial struggles with coding, particularly in JavaScript, I persevered and made significant progress in fixing and understanding the code. I am immensely grateful for the interactive coding courses that played a crucial role in helping me improve my skills.

One notable impact of the course was the reduction of my fear and apprehension towards coding. Initially, I harbored doubts and uncertainties about my coding abilities. However, through consistent practice and clear instructions from Mr. Giang, my confidence grew. I began to grasp coding concepts more effectively, and the fear that once hindered my progress slowly dissipated.

Thanks to the interactive course, I had the opportunity to engage in a dynamic and hands-on learning experience. The course facilitated active participation, enabling me to immerse myself in the material. With the step-by-step guidance provided by Mr. Giang, I gained the ability to identify and resolve coding issues, which allowed me to gradually enhance my comprehension of JavaScript, HTML, and CSS concepts and syntax.
